

Maximize Success with Smarter Order Entry

Scandit Order Entry is a rapidly deployable mobile solution for smartphones, tablets and wearables that streamlines order management processes for customers and employees. Our cross-platform mobile solution comes complete with a customizable order entry application, mobile frameworks and backend services that seamlessly integrate with existing IT systems.

Enterprise-Grade Scanning

Place Orders Anywhere, Anytime

Fast Deployment, Low TCO

Streamline Order Management with Mobile Order Entry

For many companies, placing orders has been a tedious, manual process involving catalogs, spreadsheets and phone calls. That is quickly changing as more vendors take an omnichannel approach to distributing their products, providing customers with options to place orders online or through mobile devices. In turn, market expectations have changed, and those that aren't offering a streamlined way of placing orders are at risk of losing sales and customers.

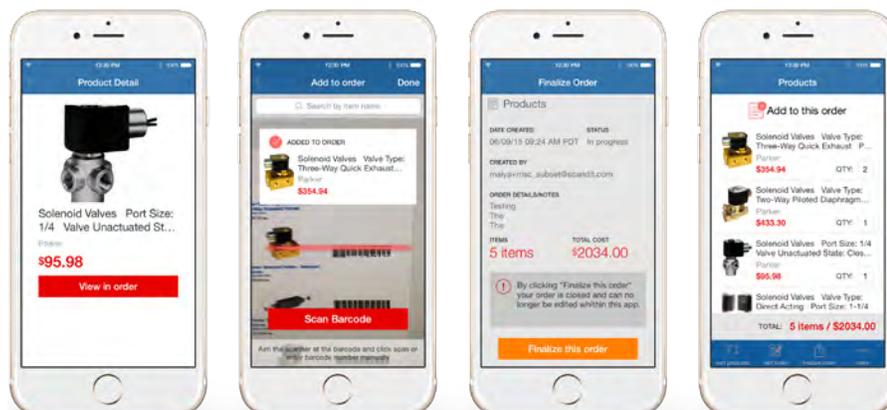

Our mobile solution provides an intuitive, efficient workflow out of the box that can be customized and integrated with existing ERP, WMS and PIM systems. Customers or employees can easily manage orders by adding products through browsing, scanning a barcode or searching the catalog—even in areas without network connectivity. Once orders are finalized, users can submit orders directly from their mobile device and track order progress every step of the way.

Increase mobile purchasing up to **85%¹** with Scandit Order Entry.

1. Increase in mobile purchasing year-over-year in 2014

Product Features

- Intuitive Workflows
- Offline Operation
- Browse, Scan or Search to Add to Order
