

Last Mile Deliveries: Two Journeys Scandit Smart Data Capture (With and Without)

Scandit-powered mobile apps turn smart devices into powerful time and labor savers. They help optimize end-to-end processes and improve productivity. Here's how Scandit Smart Data Capture can make the last mile more profitable.

At the Depot

WITH SCANDIT SMART DATA CAPTURE

WITHOUT SCANDIT SMART DATA CAPTURE

Fast, Efficient Sorting
Hover over multiple barcodes at once to help sort parcels with incredible efficiency.

Lose Time Without Batch Scanning
Pick, scan, deposit. Repeat all day.

Search & Find Parcels with AR Overlays
Scandit MatrixScan scans barcodes on multiple parcels at once to find and highlight the "special" package via an augmented reality (AR) overlay.

Waste Time Searching for Special Parcels
Without an AR overlay, good luck finding that ONE package by scanning every barcode.

70%

70% of shoppers expect to be able to make an **in-transit routing change**.

Load Your Truck for Efficiency

Scan many parcels with a single scan and see at once if your loading list has been fully scanned.

Guess, Load, Hope

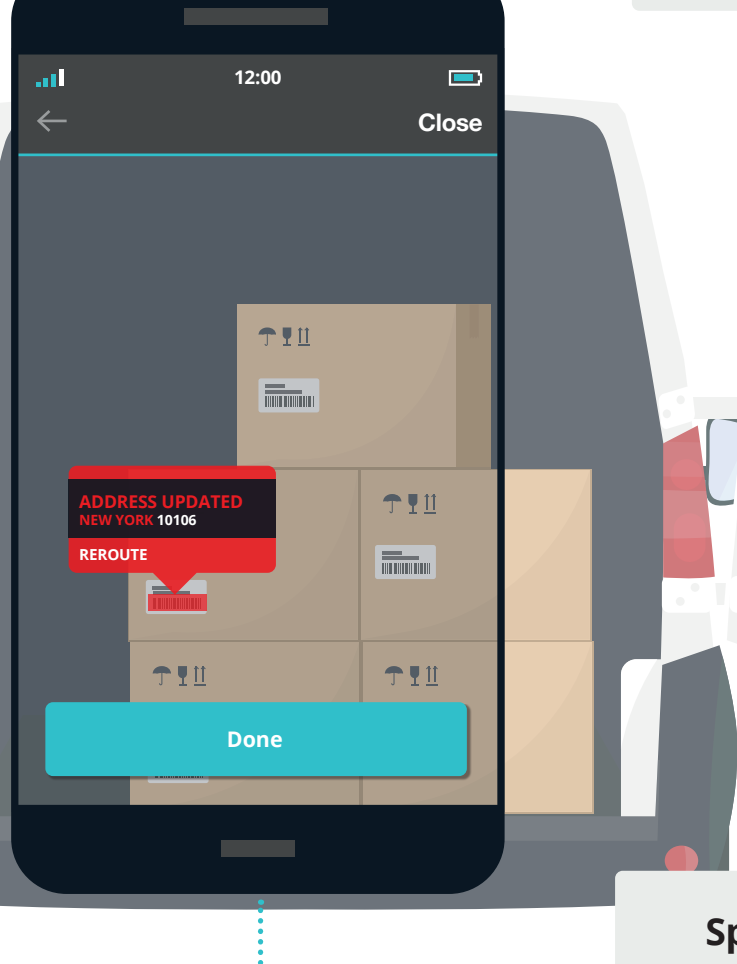

If you can't load the van by route, add searching time for each stop.

On the Road

WITH SCANDIT SMART DATA CAPTURE

WITHOUT SCANDIT SMART DATA CAPTURE

Fast Finds
Scan a parcel for real-time AR information. Access customer details, see real-time changes, find what's next.

Search for a Package
Pick, scan, search. No AR overlay means a surprise when a real-time change occurs.

40-60%

Estimated time drivers on delivery are **not driving** and are instead **seeking packages for the next delivery**.

Logistics Viewpoints 2020

Special Delivery Information

One quick scan reveals real-time issues, requirements or special information needed before delivering a package.

Worry About Delivery Information

Hope that all the delivery requirements are met and haven't changed.

Contactless Deliveries

Customers can use a Contactless Proof of Delivery web app to scan a package and sign on their own device. Drivers can also scan a barcode or ID, take a photo or confirm proof of delivery - all on one smart device.

Contactless Delivery?

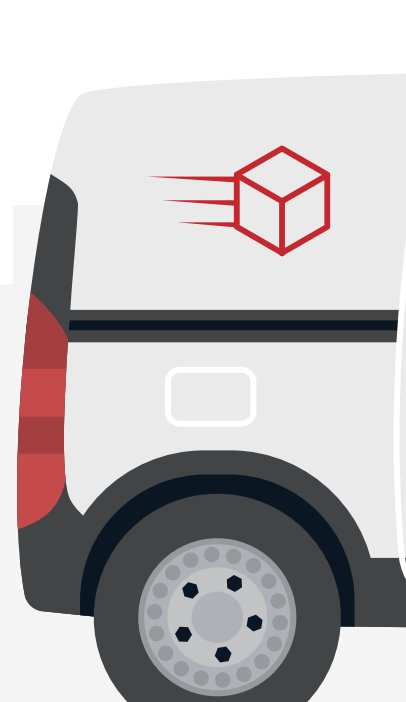

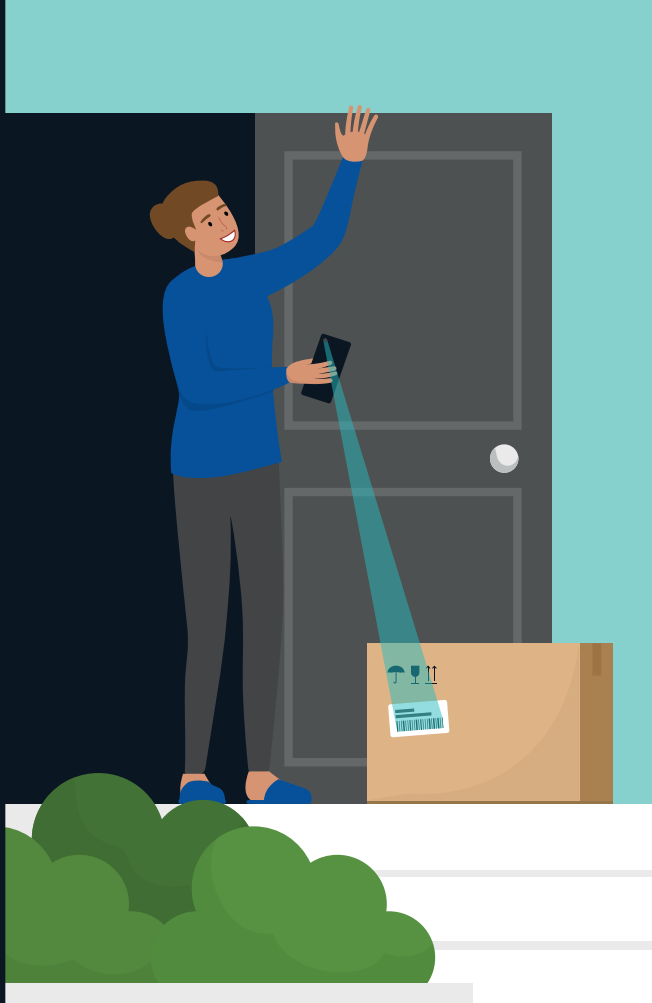

Leave the box and take a picture of the customer's masked face. With no signature, you're risking friendly fraud.

Age Verified Delivery

A scan of the delivery label alerts the driver that it needs age-verification. They contactlessly scan the customers' drivers license, which confirms they are over-18.

Driver Checks ID

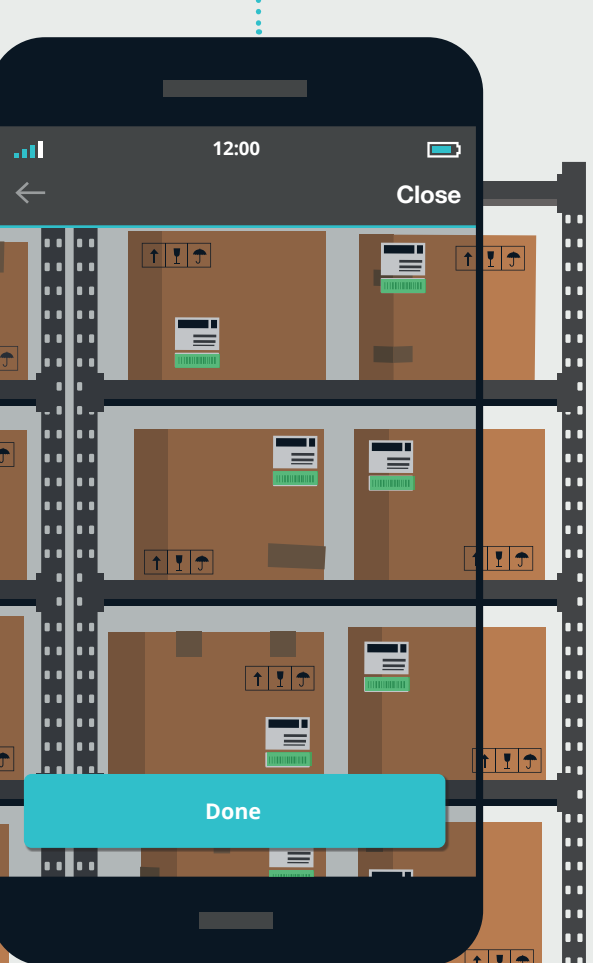

The responsibility is on the driver to check the ID. This means they have to pick up the document as well as verify it themselves.

At the PUDO Point

WITH SCANDIT SMART DATA CAPTURE

WITHOUT SCANDIT SMART DATA CAPTURE

ID Verification on Pick Up
Employees can use ID Scanning capability on a smart device to scan drivers licenses and other identity documents.

Lost Time
Check the identification manually. Run the risk of losing time with manual entries or false parsings.

Parcel Inventory Check
Build an instant inventory list with MatrixScan. Just point the smart device camera at the parcels and it will be created.

Manual Data Entry
Each parcel has to be scanned individually, taking the employee away from other tasks like serving customers.

74%

74% of customers **prioritize delivery** most in the **online shopping experience**.
