

Smartphone Scanning is Revolutionizing Fashion Retail

Smartphone scanning, powered by Scandit's barcode scanning technology, is central to fashion's pandemic-fueled digital revolution. Inventory tracking, efficiency, contactless shopping, and easy implementation are among the many benefits.

Your Apparel

Why smartphone scanning is the catch-all solution for retail operations

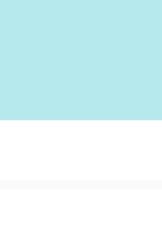

Safe shopping and working

Help make staff more efficient

Track inventory across the chain

Easy implementation

63%

63% of consumers say retailers use technologies to cut costs, rather than to address pain points... **but the right technology helps you to do both.**

CapGemini

Safety First

Help staff and shoppers be more contactless

Social distancing means smartphones have become first-choice in terms of keeping staff and customers safe.

Employees and shoppers get access to key product information directly on their own devices.

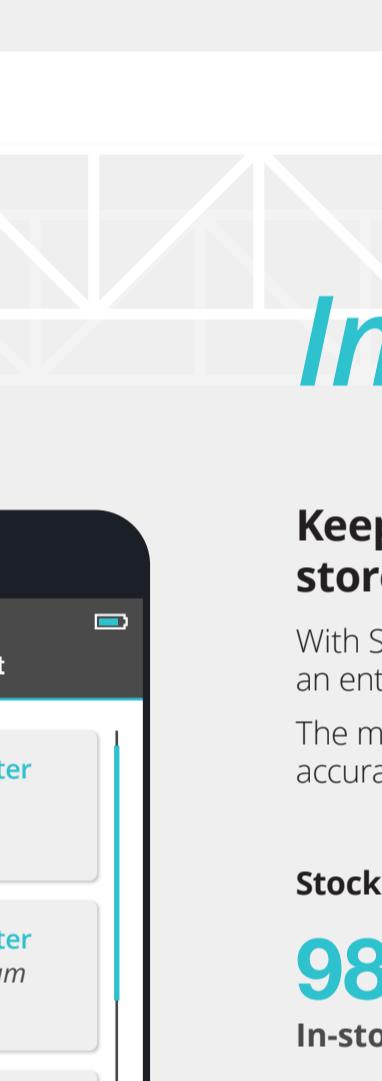

57%

57% of shoppers in the US said they were nervous about going in-store during the holiday season.

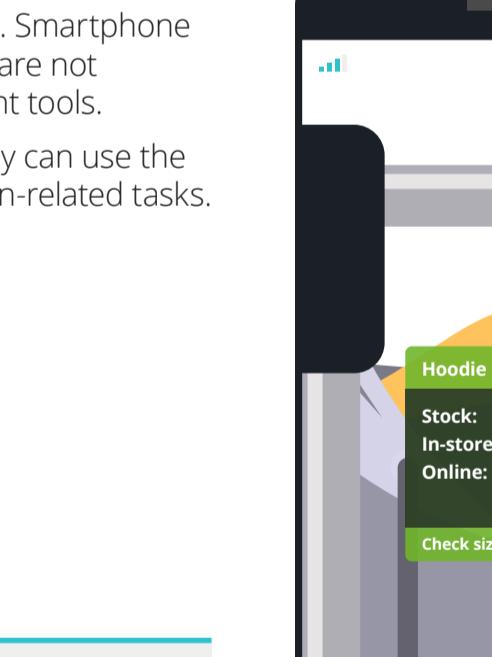

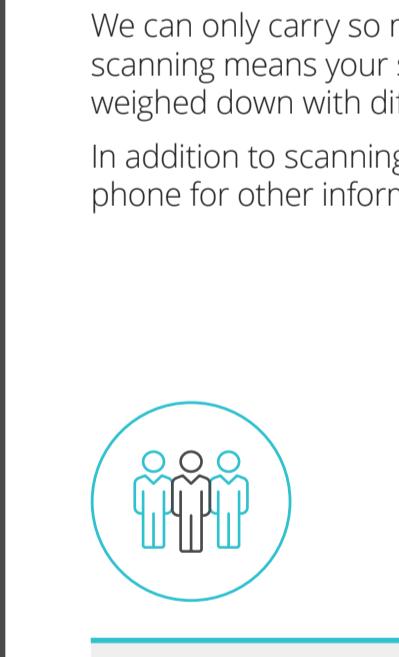

Deloitte

Employees get answers as quickly and easily as possible. And crucially, there is no need to share devices.

Inventory Tracking

Keep track of inventory across your store network

With Scandit's Barcode Scanner SDK, every worker can have an enterprise-grade scanning device at smartphone cost.

The more people are updating inventory levels, the more accurate your data will be.

Stock accuracy levels

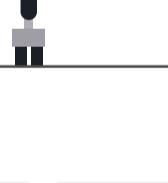

98.5%

In-store

99.99%

Online

For some retailers, a real-time view into inventory data resulted in stock accuracy levels averaging 99.99% for online and 98.5% for in-store.

Oracle

Employee Efficiency

One device to rule them all

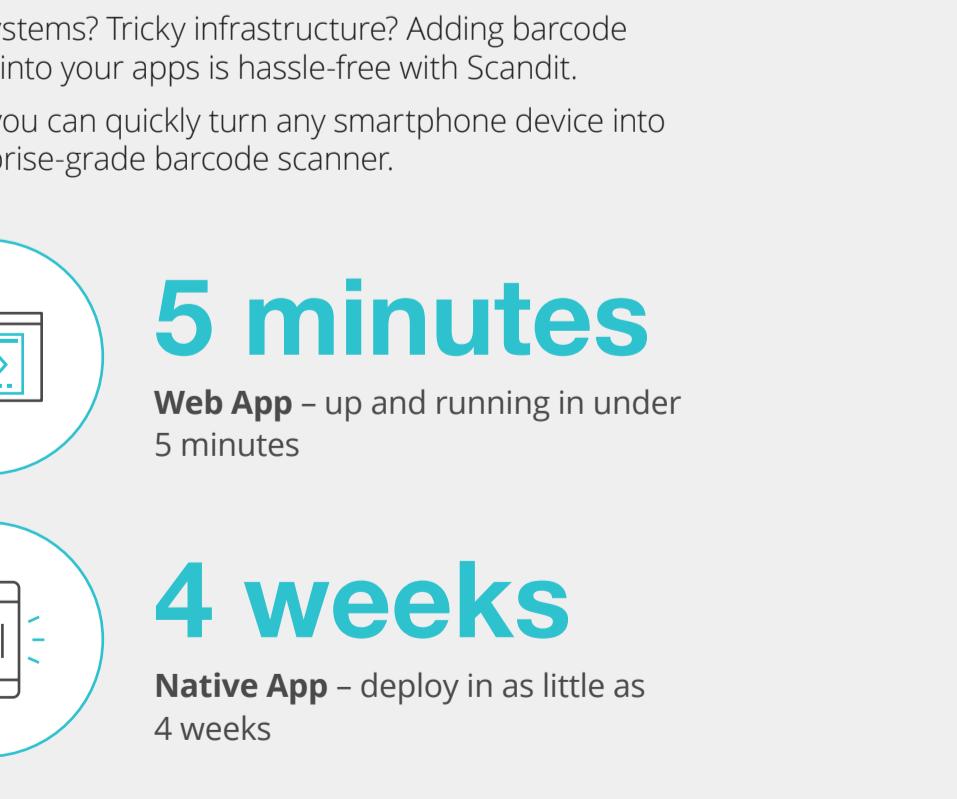

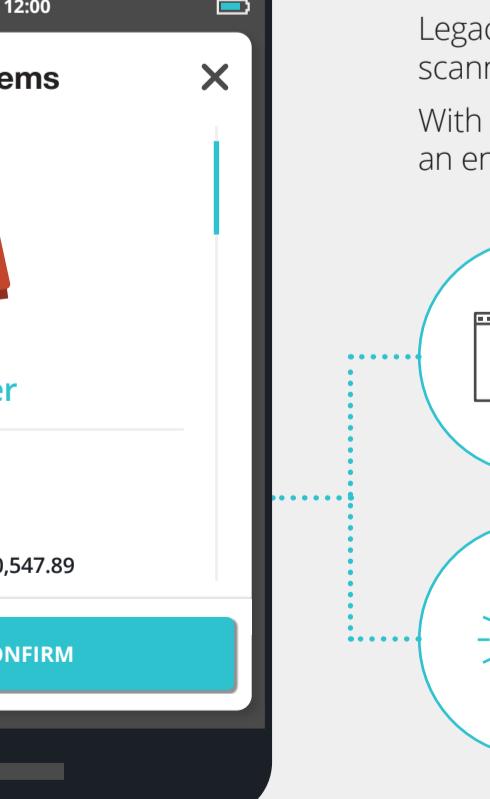

We can only carry so much. Smartphone scanning means your staff are not weighed down with different tools.

In addition to scanning, they can use the phone for other information-related tasks.

In a retail field test, 2 in 3 of employees said they preferred a Scandit-powered smartphone scanner over that bulky dedicated scanner.

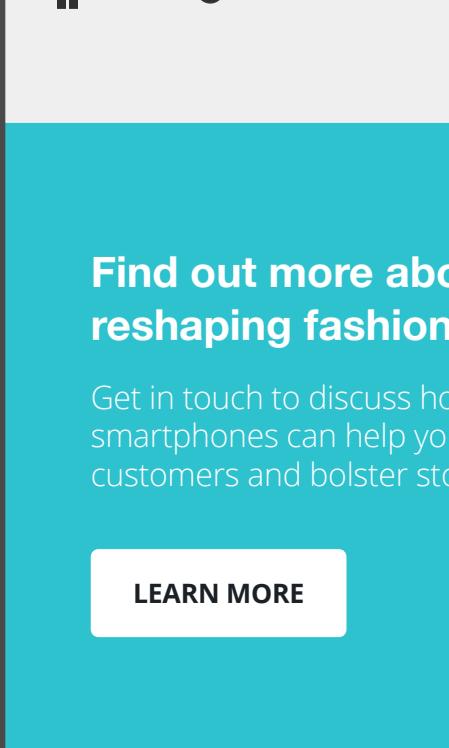

Scandit

Scandit makes it easy to implement barcode scanning

Legacy systems? Tricky infrastructure? Adding barcode scanning into your apps is hassle-free with Scandit.

With us, you can quickly turn any smartphone device into an enterprise-grade barcode scanner.

5 minutes

Web App – up and running in under 5 minutes

4 weeks

Native App – deploy in as little as 4 weeks
