

Deliver Age-Restricted Products: Fast and Friction-Free

Scandit's ID scanning technology means it's fast and simple to deliver age-restricted products like alcohol. Drivers can contactlessly scan a wide range of ID documents on their Scandit-powered app – letting the device make the delivery decision for them.

ID Verification You Can Trust

Drivers no longer have to worry about handing over a product that is not meant for underage customers. Here their Scandit-powered smartphone scans the customer's driver license.

Drivers can do this from a safe distance, without the need to touch the ID document. All data is encrypted, and the processing is on the device. So you also provide a secure service for your customers.

Capture Multiple ID Documents

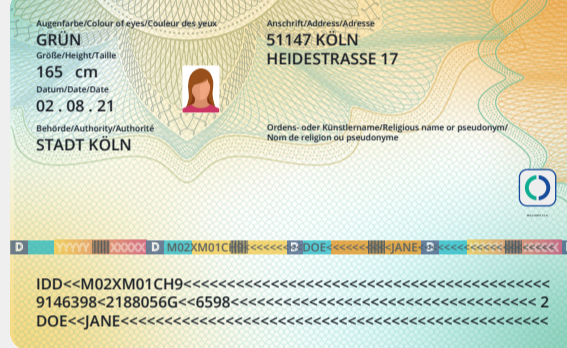

Scandit Smart Data Capture combines barcode scanning and optical character recognition (OCR) to read numerous ID cards, passports, visa certificates, and driver's licenses.

In testing on PDF417 barcodes, we found over 163 different versions of the standard. We track this and constantly update the parser to ensure you're always up to date.

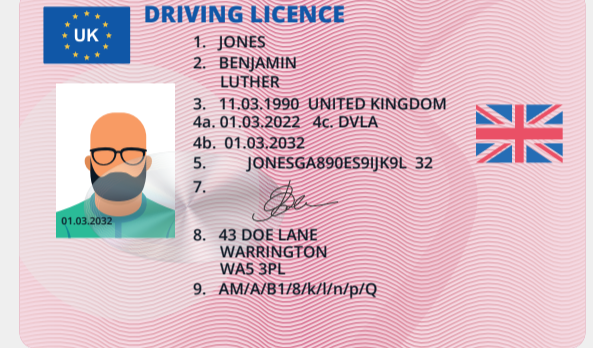

USA/Canada – IDs and Driver Licenses

A smartphone enabled with Scandit Smart Data Capture reads the PDF417 barcode on the back or the human readable text on the front.

Passports and European ID Cards

Scandit can scan and parse the 'machine readable zone'.

EU/UK Driver Licenses

Our ID scanning software also reads and correctly interprets the human readable text on the front of the license.

Improve Delivery Driver Productivity

Giving delivery drivers Scandit's ID Scanning for age verified deliveries is a great way to improve your bottom line. Due to more robust ID scanning, less "no scans" happen where ID data has to be entered manually. Delivery efficiency can be increased by 70% which can save a delivery company \$140,00 annually.

Driver Productivity Benefits*

Costs for manual AVD per year	Total minutes needed for AVD per day	
\$197,500	1,975	Existing scanning solution
\$57,375	574	SCANDIT

*Example based on 30,000 age verified deliveries per day, an average wage of \$20 per hour and 4.75% more manual entries of 60s needed due to no scans.

Integrate With Any Mobile Or Web-based App

Scandit Smart Data Capture can be swiftly integrated into your app. While our enterprise-grade support will take you all the way to deployment and beyond.

Native App

Web App

- Scan Machine Readable Zones (MRZ) from different ID documents.
- Directly scan and structure the text on the front of a driver's license.
- Scan and parse PDF417 barcodes on smart devices using Android and iOS.

Scan RFID passports on iOS.

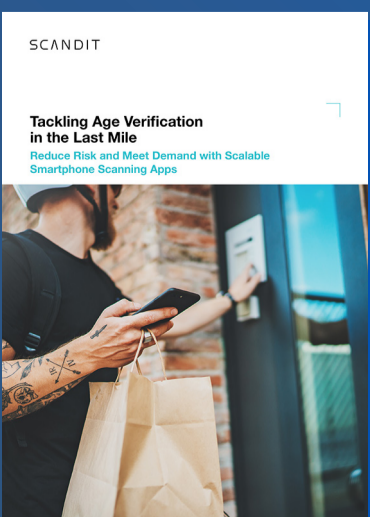

SDK for the web can be implemented in hours.

ID Scanning With Scandit Makes Drivers' Lives Easier

Time, traffic, and heavy packages, are just some of a delivery driver's challenges. Give them an age-verification application that helps them do the job rather than adds another problem to their list.

- **Easier Onboarding** – augmented reality provides crucial on-screen guidance for new drivers.
- **BYOD in Peak Periods** – Scandit enables seasonal workers and subcontractors to have age verification on their own devices.
- **Automation** – take the responsibility for age verification away from the driver and hand it to the device.
- **High-Performance Smart Data Capture** – drivers need a reliable and high-performance ID scanning software.
