

Get the '5 Rights' of Medication Administration Right

Medication administration accuracy is non-negotiable within healthcare. Smart data capture enabled smart devices offer a better solution over dedicated scanners to meet high accuracy standards.

The 5 Rights of medication administration are key to patient safety

Yet, errors occur despite healthcare professionals taking great care to uphold these rights.

Why? Chronic staff shortages increase the risk to patient care.

100,000+

medication errors reported annually to the U.S. Food and Drug Administration.

1.2 million

nurses will be needed by 2030 to address the current deficit.

Our 5 Rights of smart device scanning support accurate medication administration:

The Right Device

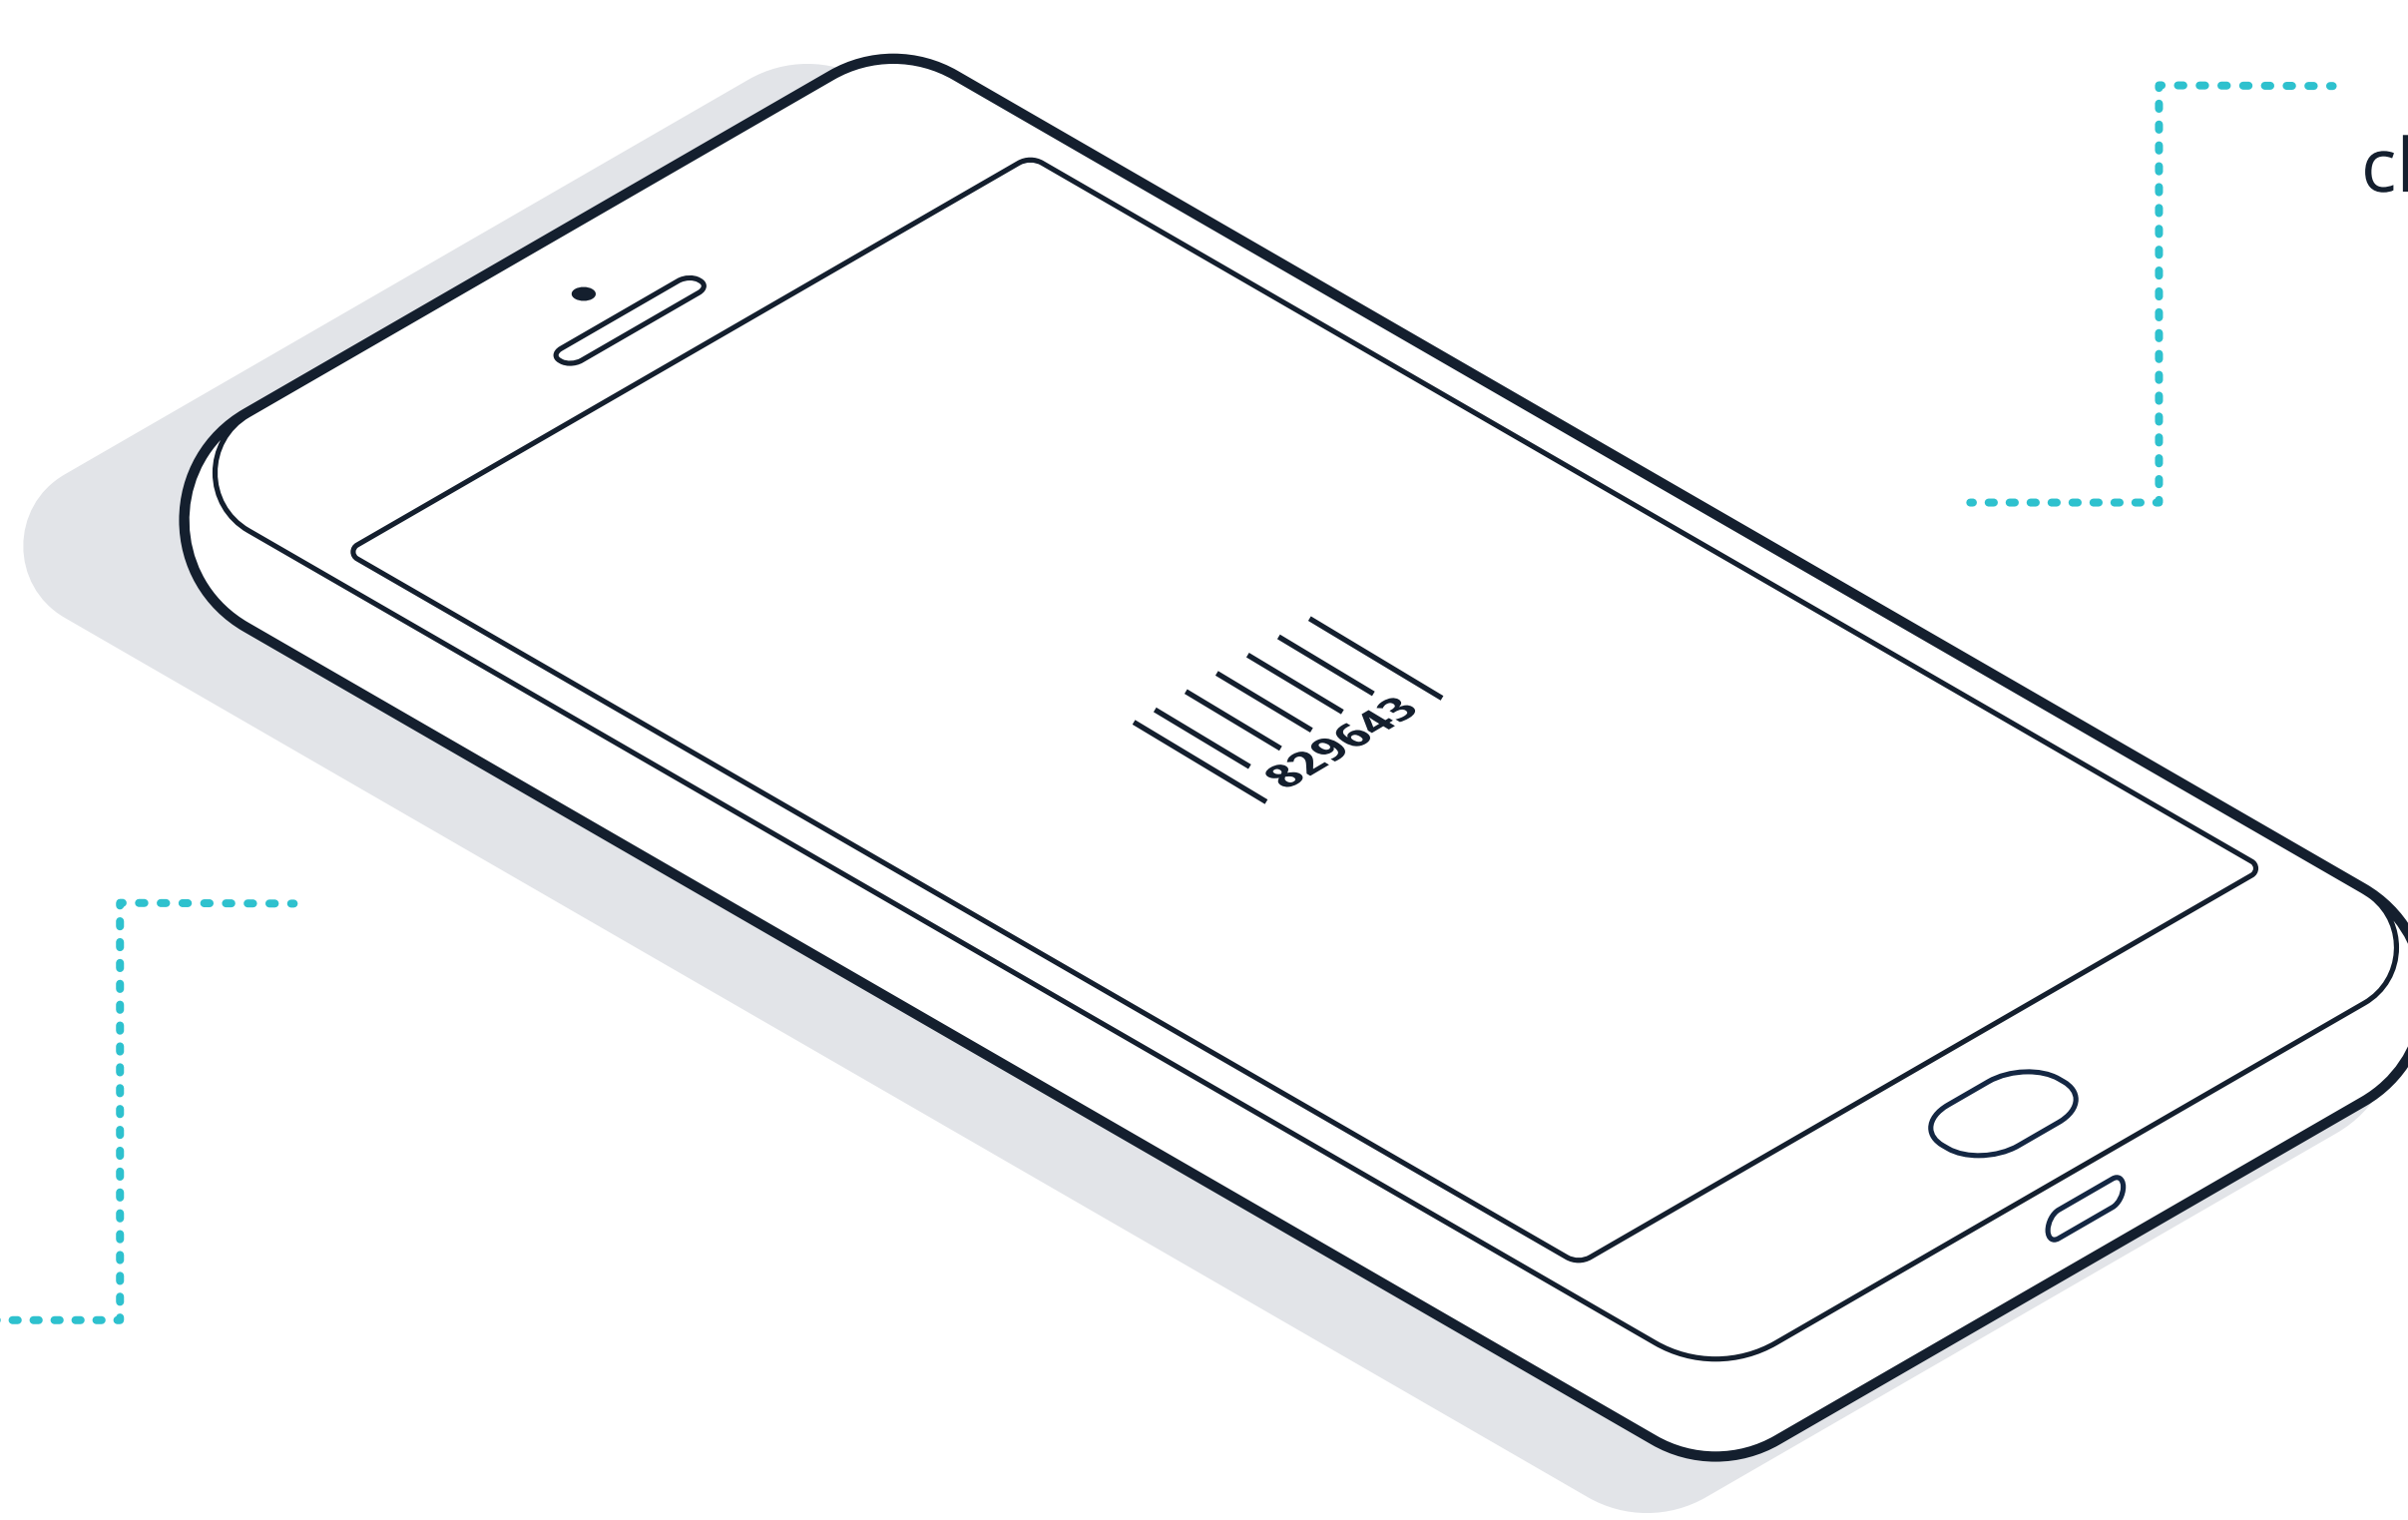

Smartphones are lightweight and easy-to-use for nurses, instead of unwieldy, dedicated scanners.

Durable

smart devices for challenging environments

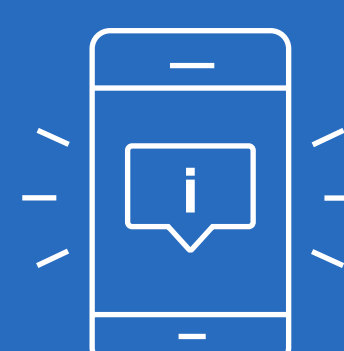

20,000+

device models are supported by Scandit's barcode scanner SDK

The Right Performance

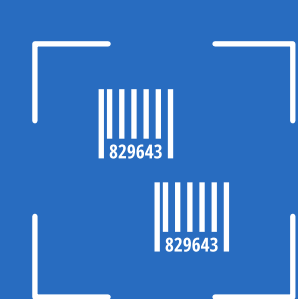

Ensuring the 5 Rights of medication administration requires easy-to-use, error-free scanning technology. Scandit Smart Data Capture on smart devices offers:

AR overlays to confirm data and receive additional information

High accuracy scanning of curved, shiny wristbands to identify the right patient

Multi-barcode scanning to identify the right medication on crowded shelves

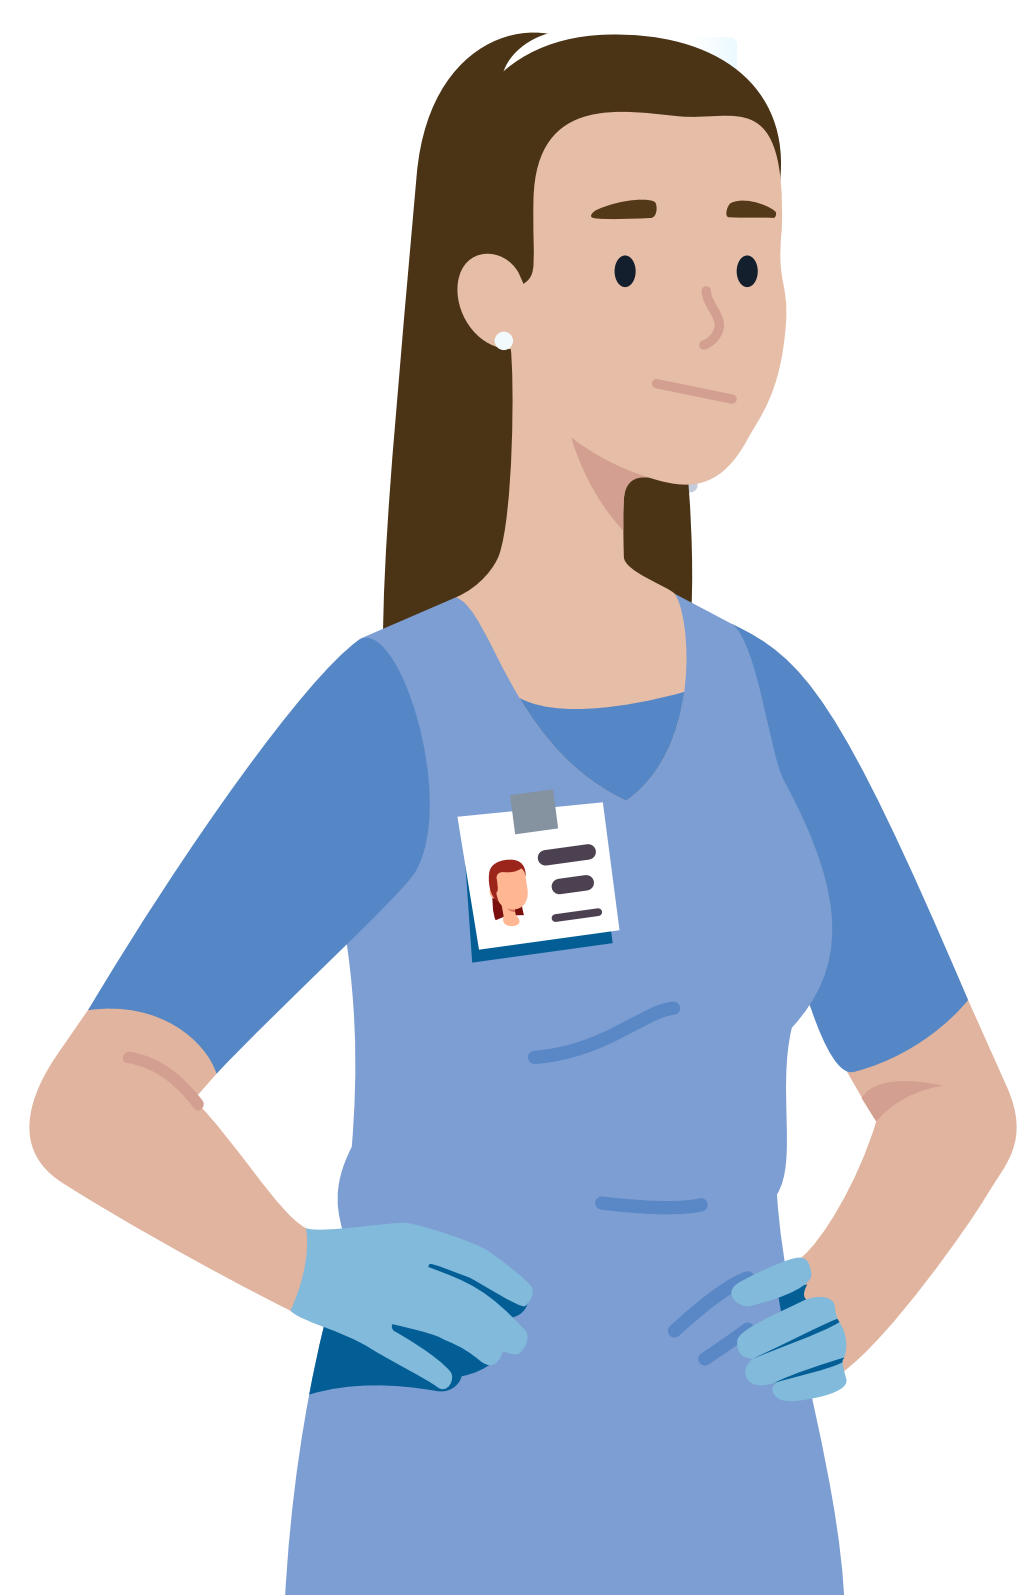

3X faster scanning with MatrixScan

~40% greater scanning range

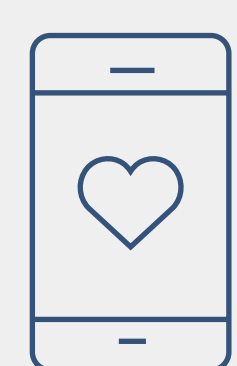

The Right Onboarding Experience

Busy nurses must master new technology fast, to eliminate stress, improve productivity and performance.

AR overlays on smart devices speed up training

A familiar user experience makes smartphones the perfect choice for barcode scanning

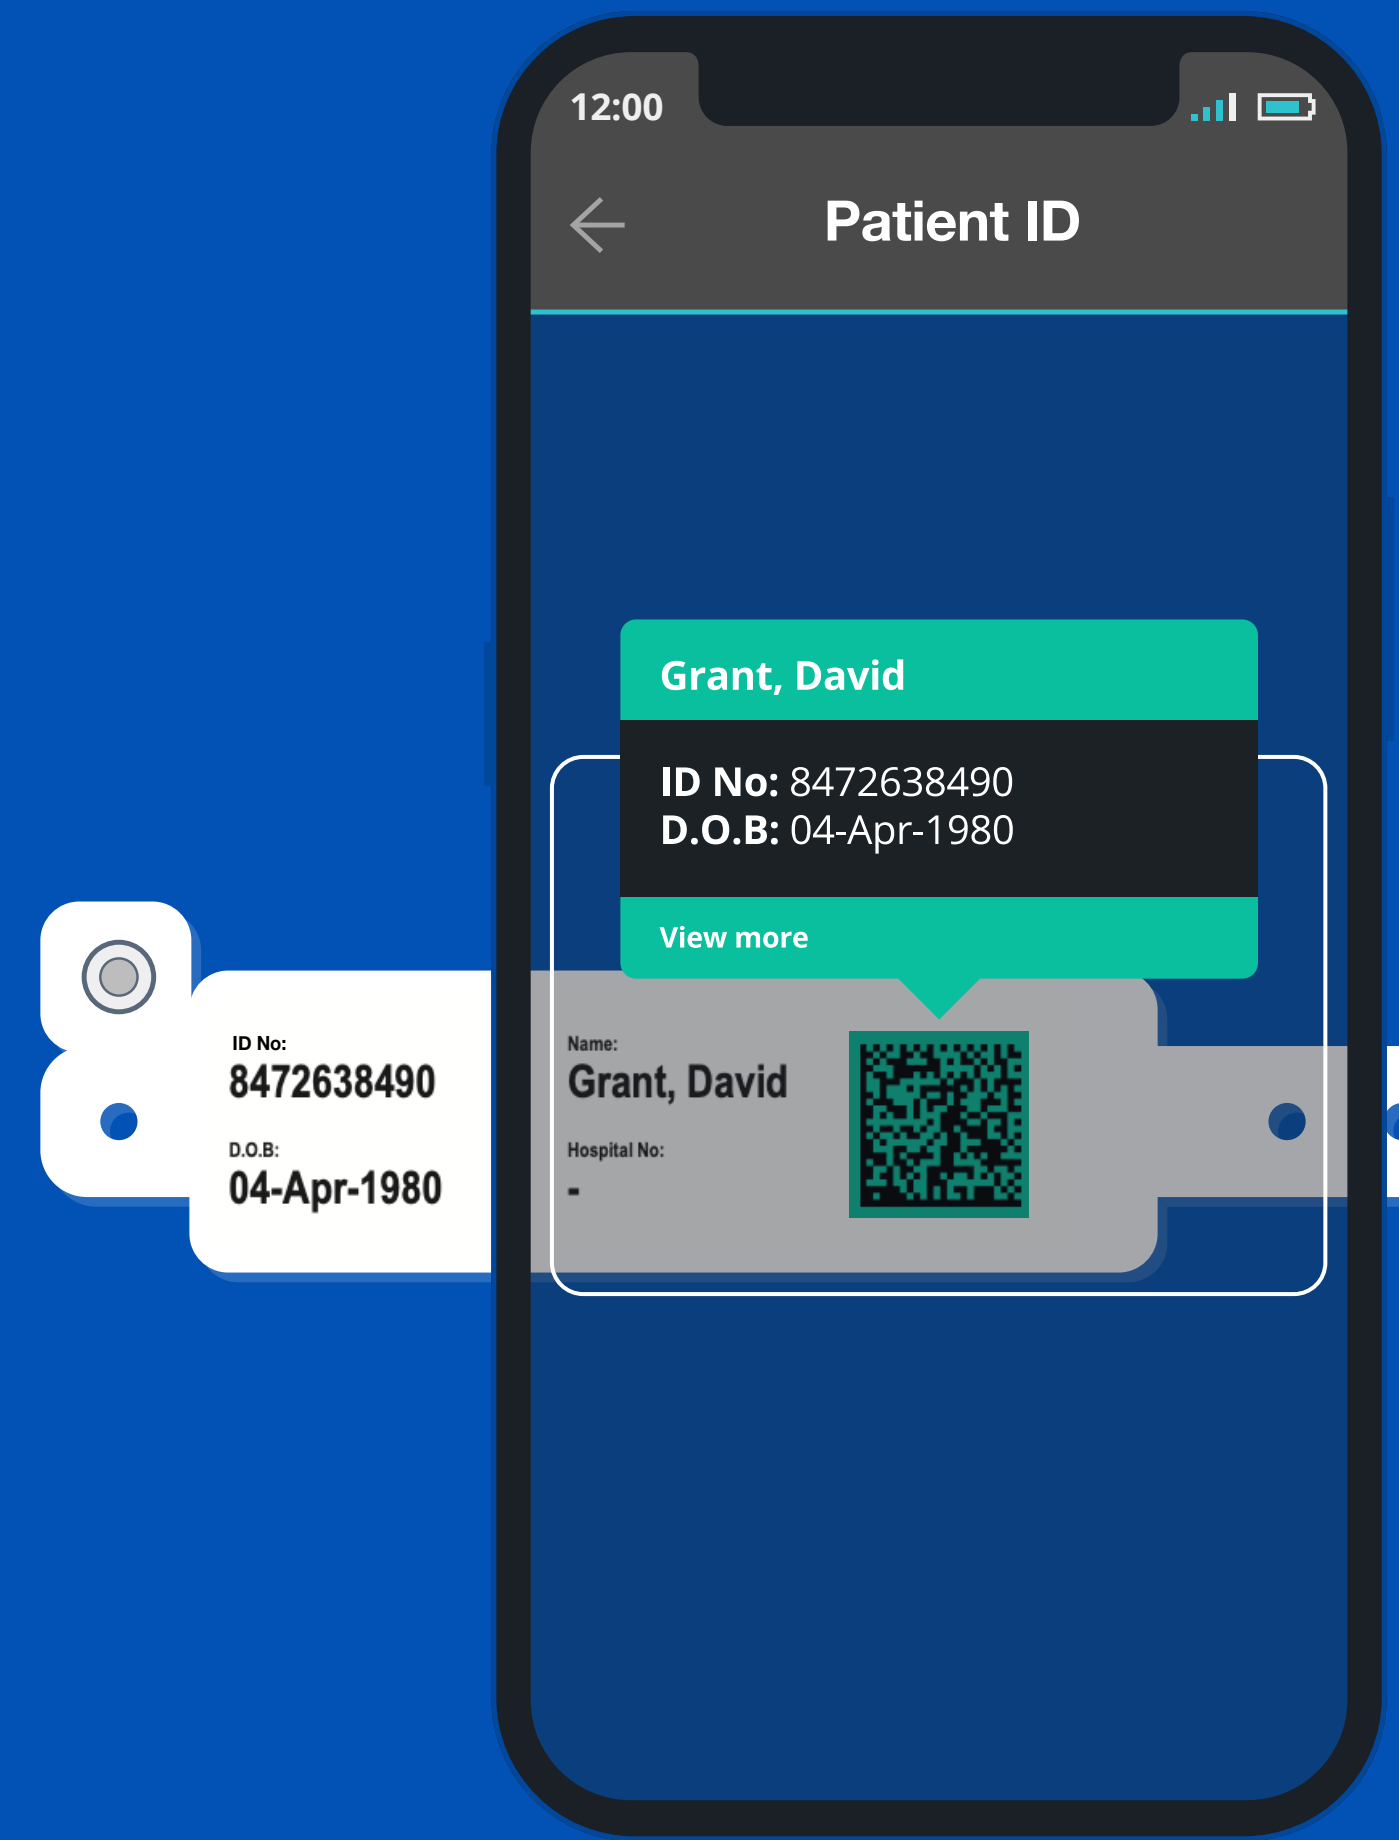

The Right Patient Experience

A powerful scanning solution can give nurses more time with patients and improve overall satisfaction levels.

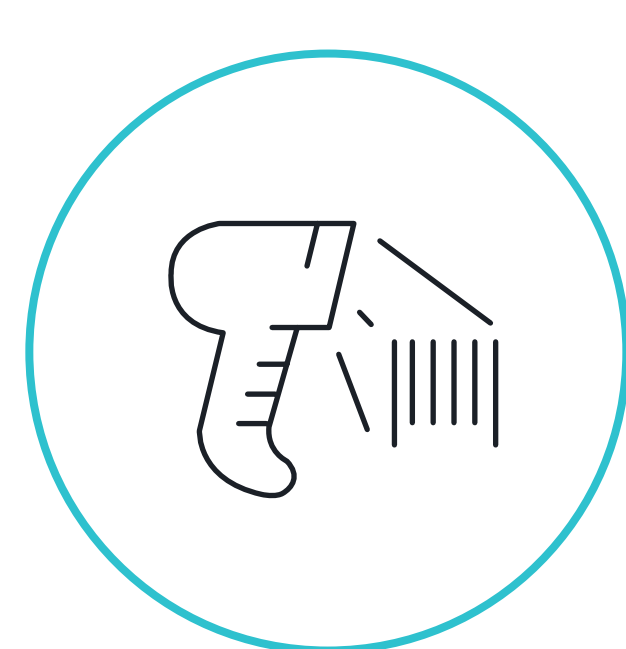

Non-intrusive scanning means not disturbing a sleeping patient to scan the wristband, thanks to high-range accuracy in low light on curved surfaces.

The Right Cost

Scandit powered smart devices are flexible and future-proof, increasing productivity and accuracy while reducing expensive device costs.

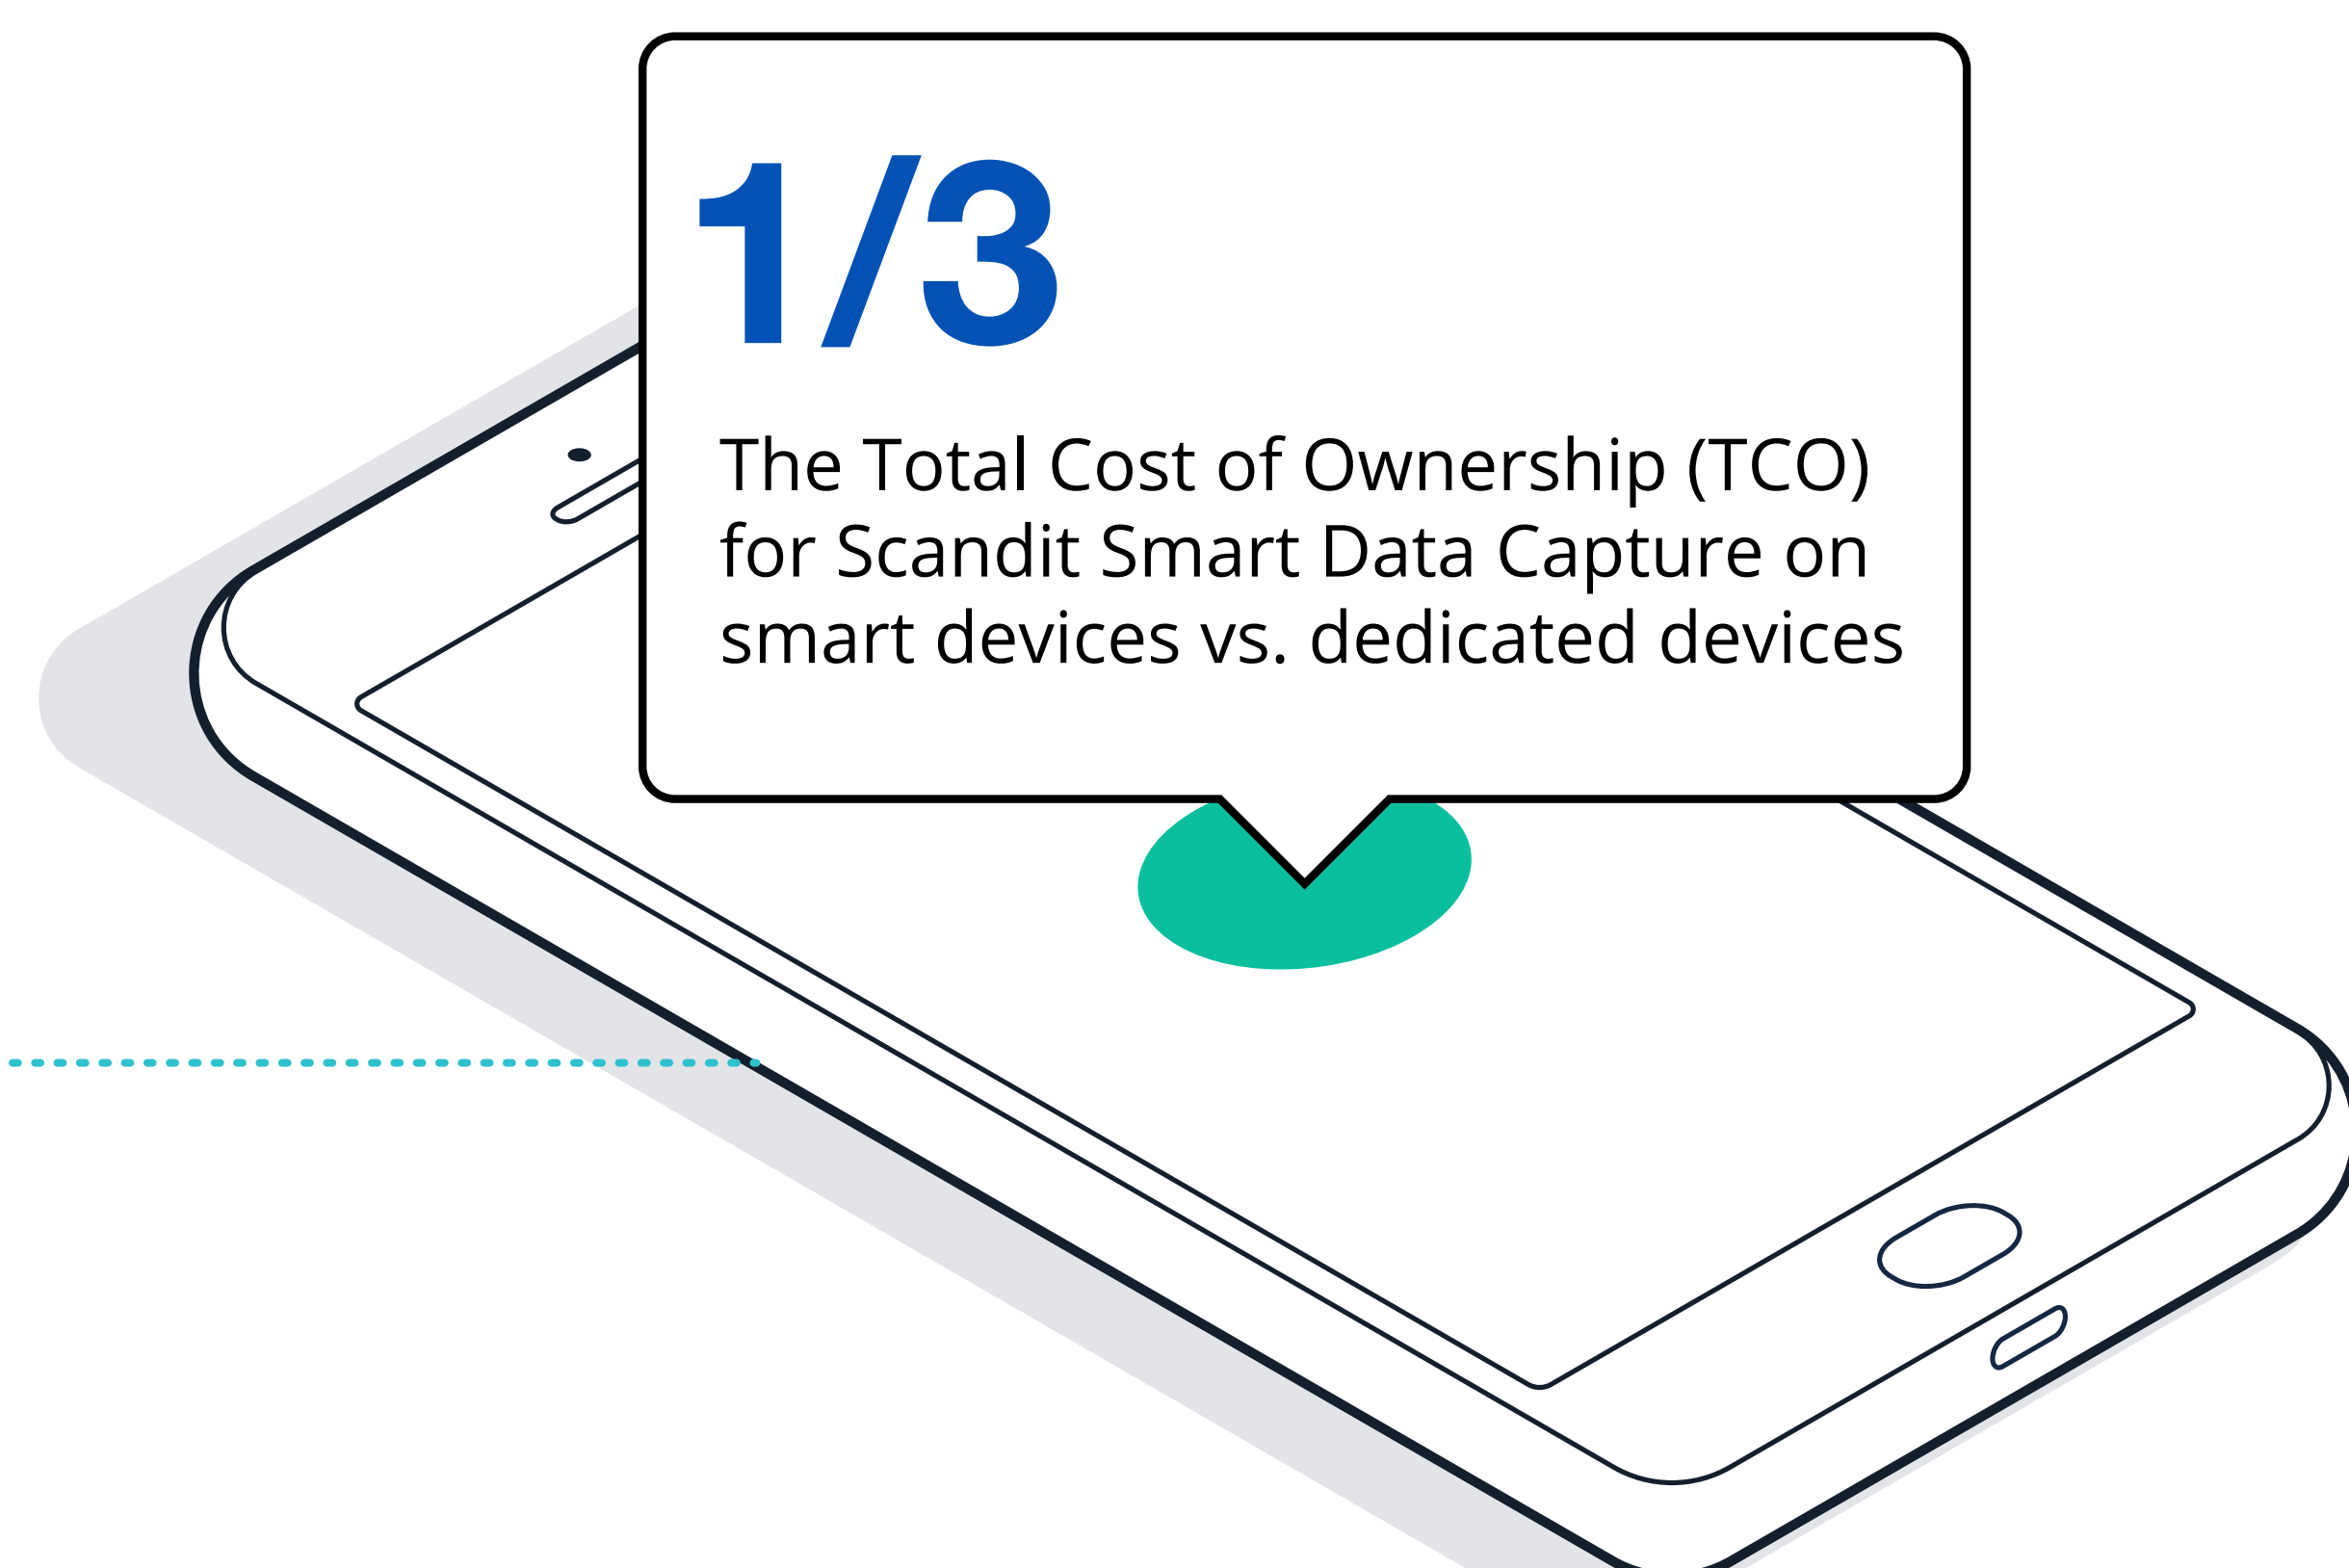

Dedicated Scanner

Vs.

Smart Device
