

Smarter Delivery Services with ID Scanning

Scandit's ID scanning technology allows any smart device to scan and parse ID documents. Gig delivery drivers can be onboarded one moment and then have the ability to efficiently deliver packages like high-value items and registered letters more securely. Even on their own device.

Driver Onboarding

Registered Post

High-Value Items

Age-Restricted Goods

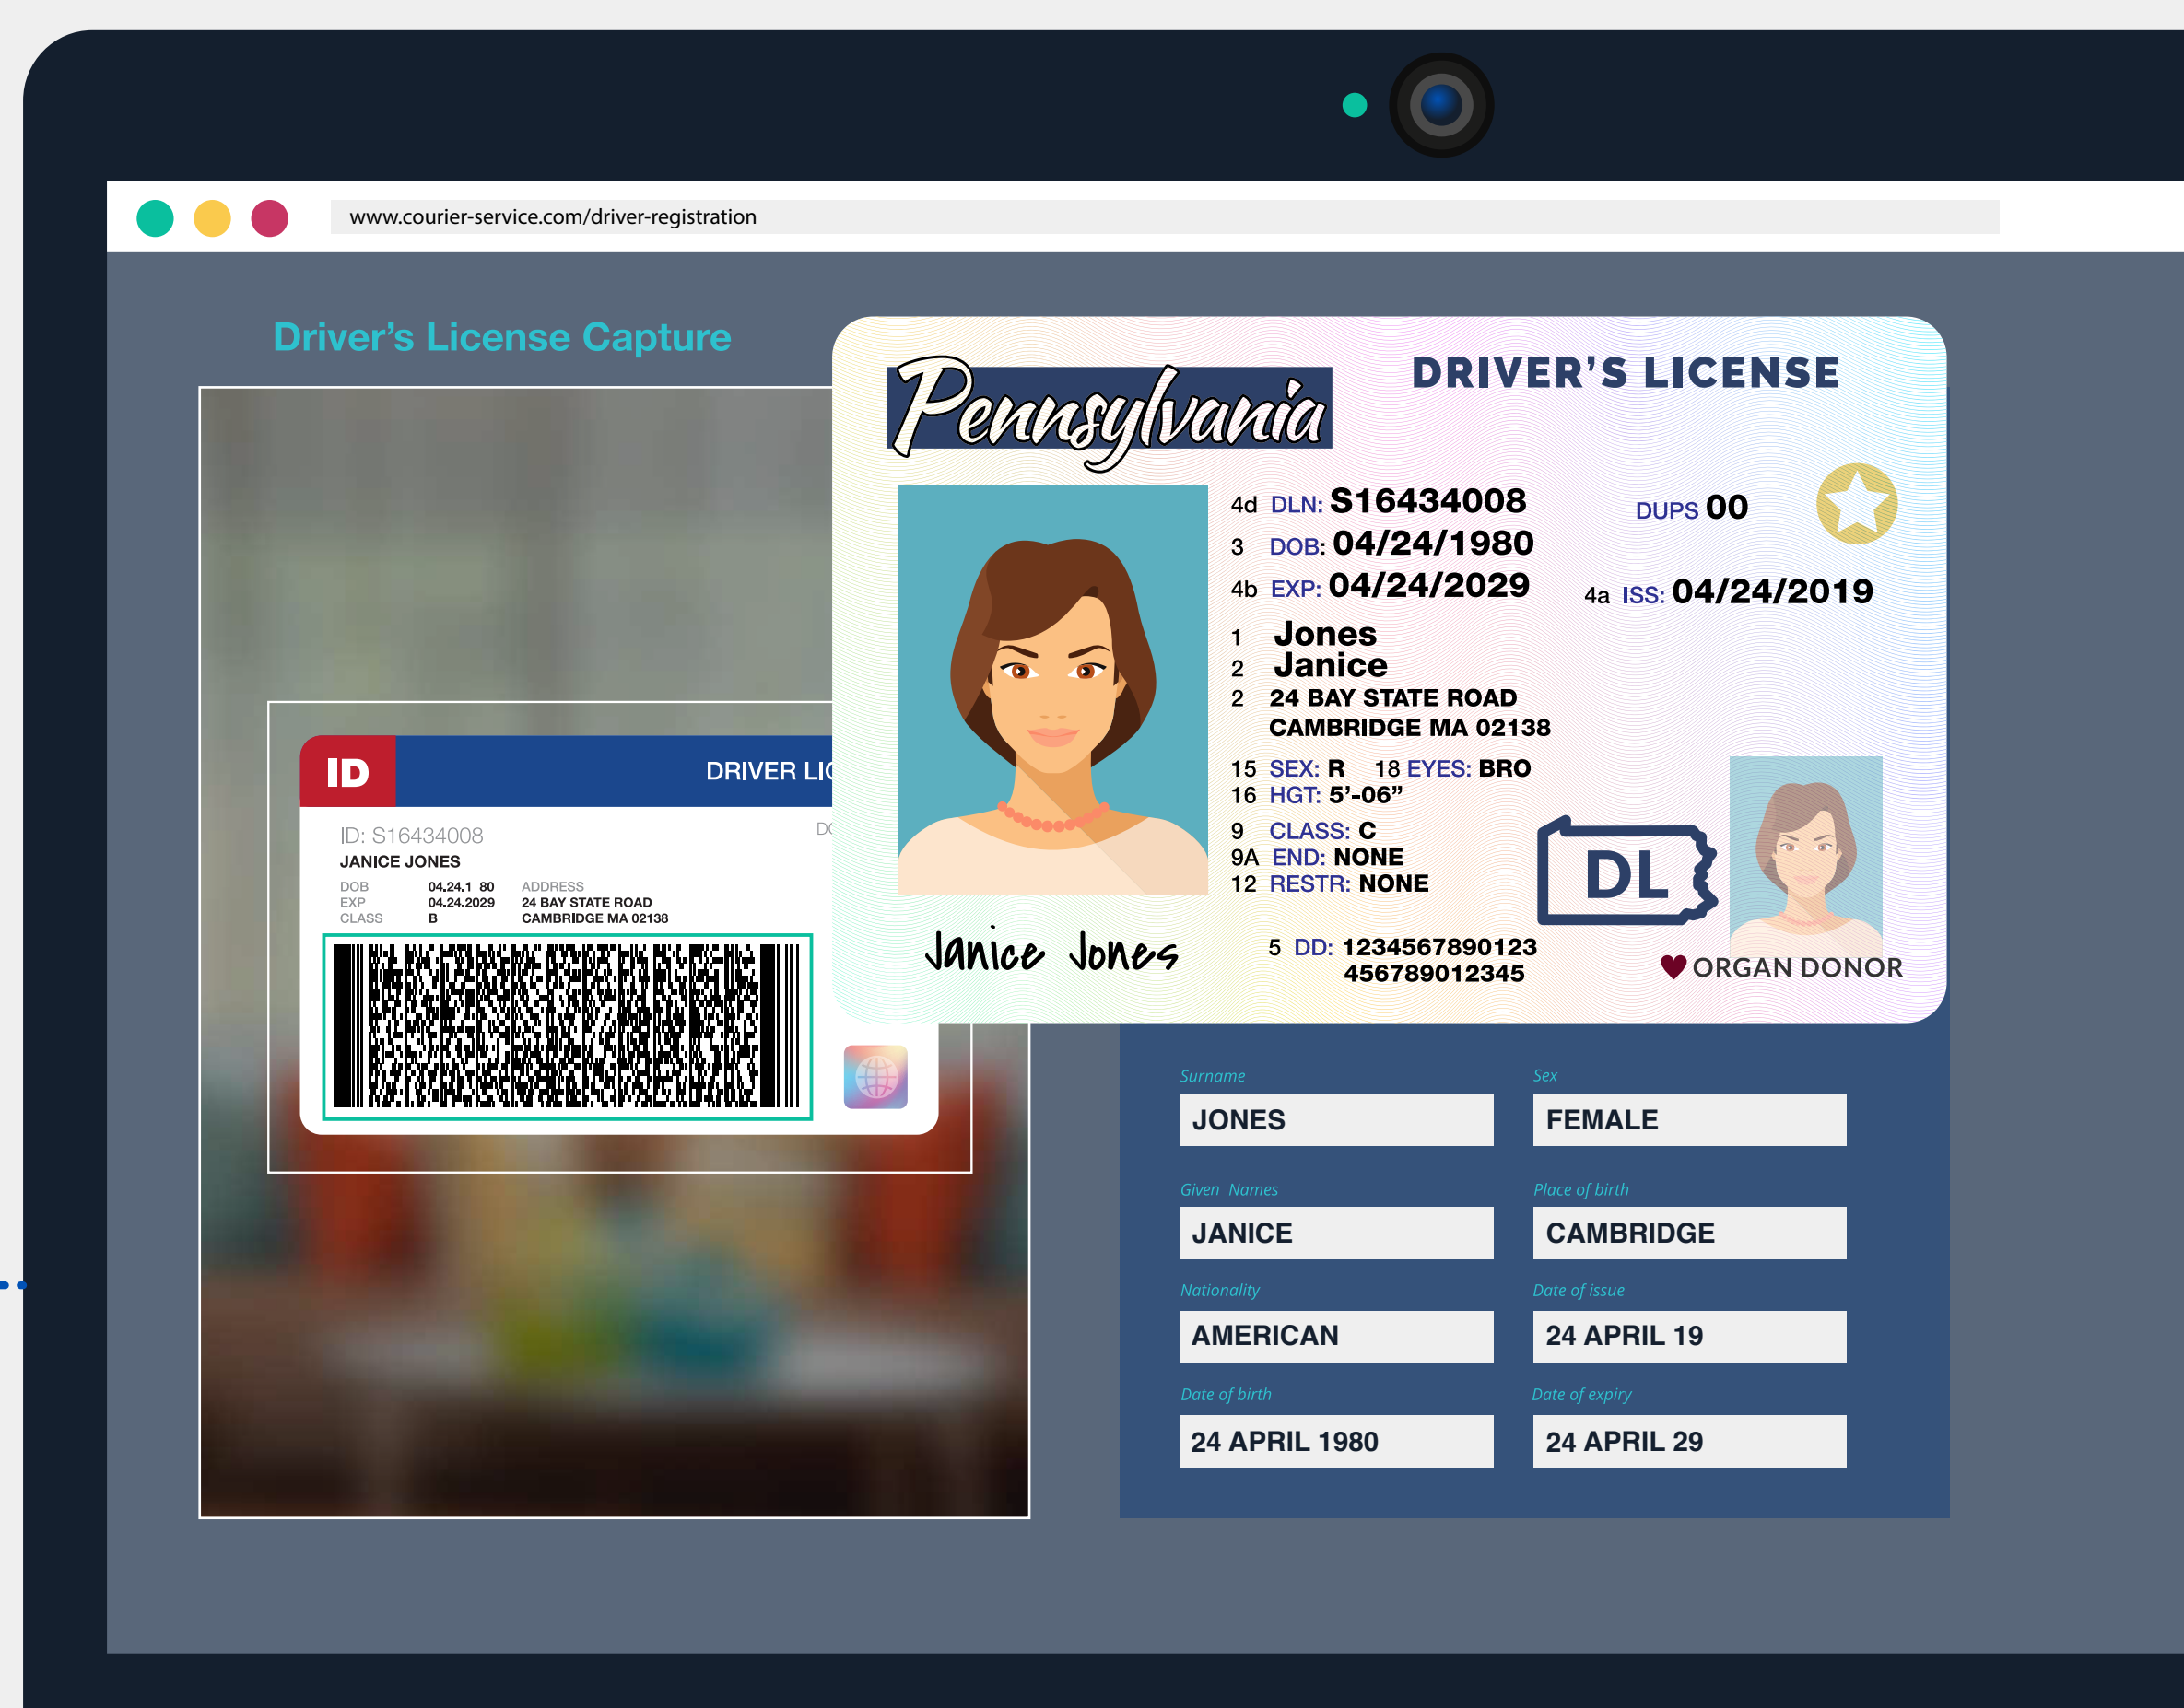

From Gig Worker Onboarding to Delivery

Leave the form filling behind and onboard drivers with ID scanning. Here the driver scans their driver's license on the delivery company's website. The site captures all relevant driver's license data from the scan.

How it's done

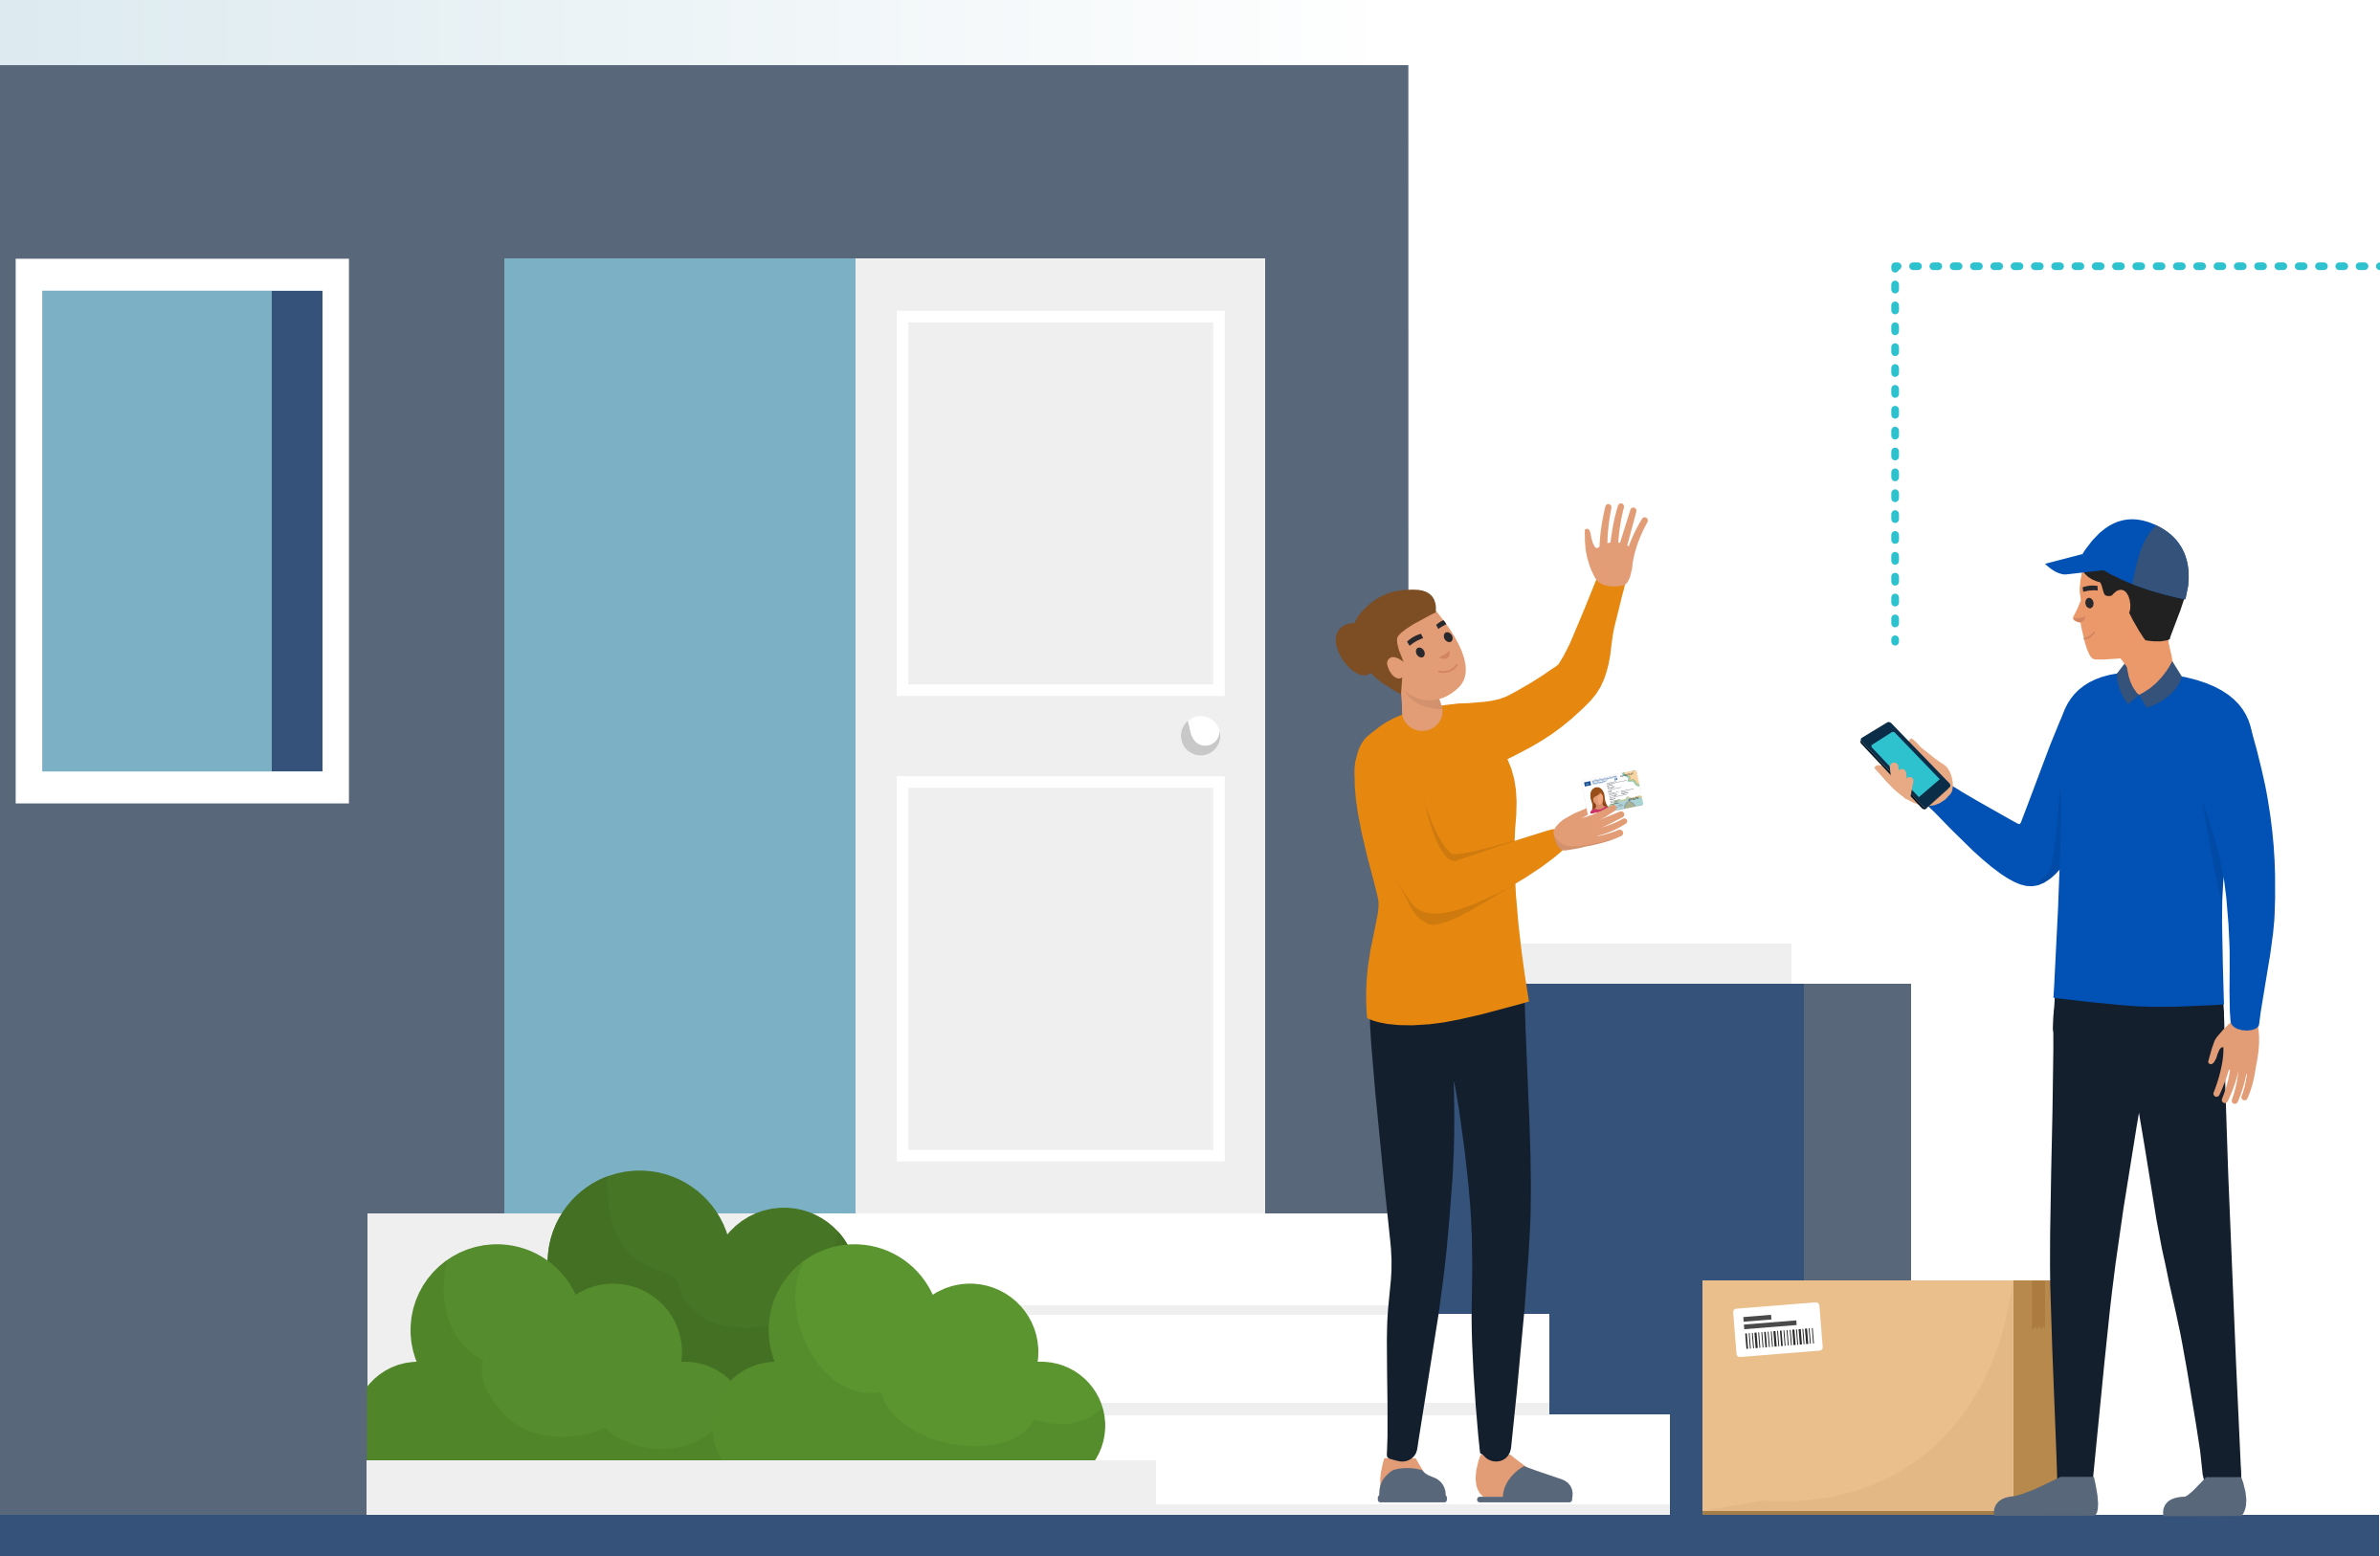

Both Scandit's Native and Web SDK can accurately capture information from ID documents while checking their authenticity. The Web SDK also removes the need to download an app prior to registration.

Web SDK

Proof of Delivery on the Doorstep

Our ID scanning software securely reads and extracts information from identity documents, including the recipient's name and document number. It processes this information on-device without storing any personal data.

Sending High-Value Items?

Ensuring the safe-delivery of high-value items is a challenge for delivery firms, but it is also an opportunity to provide new services.

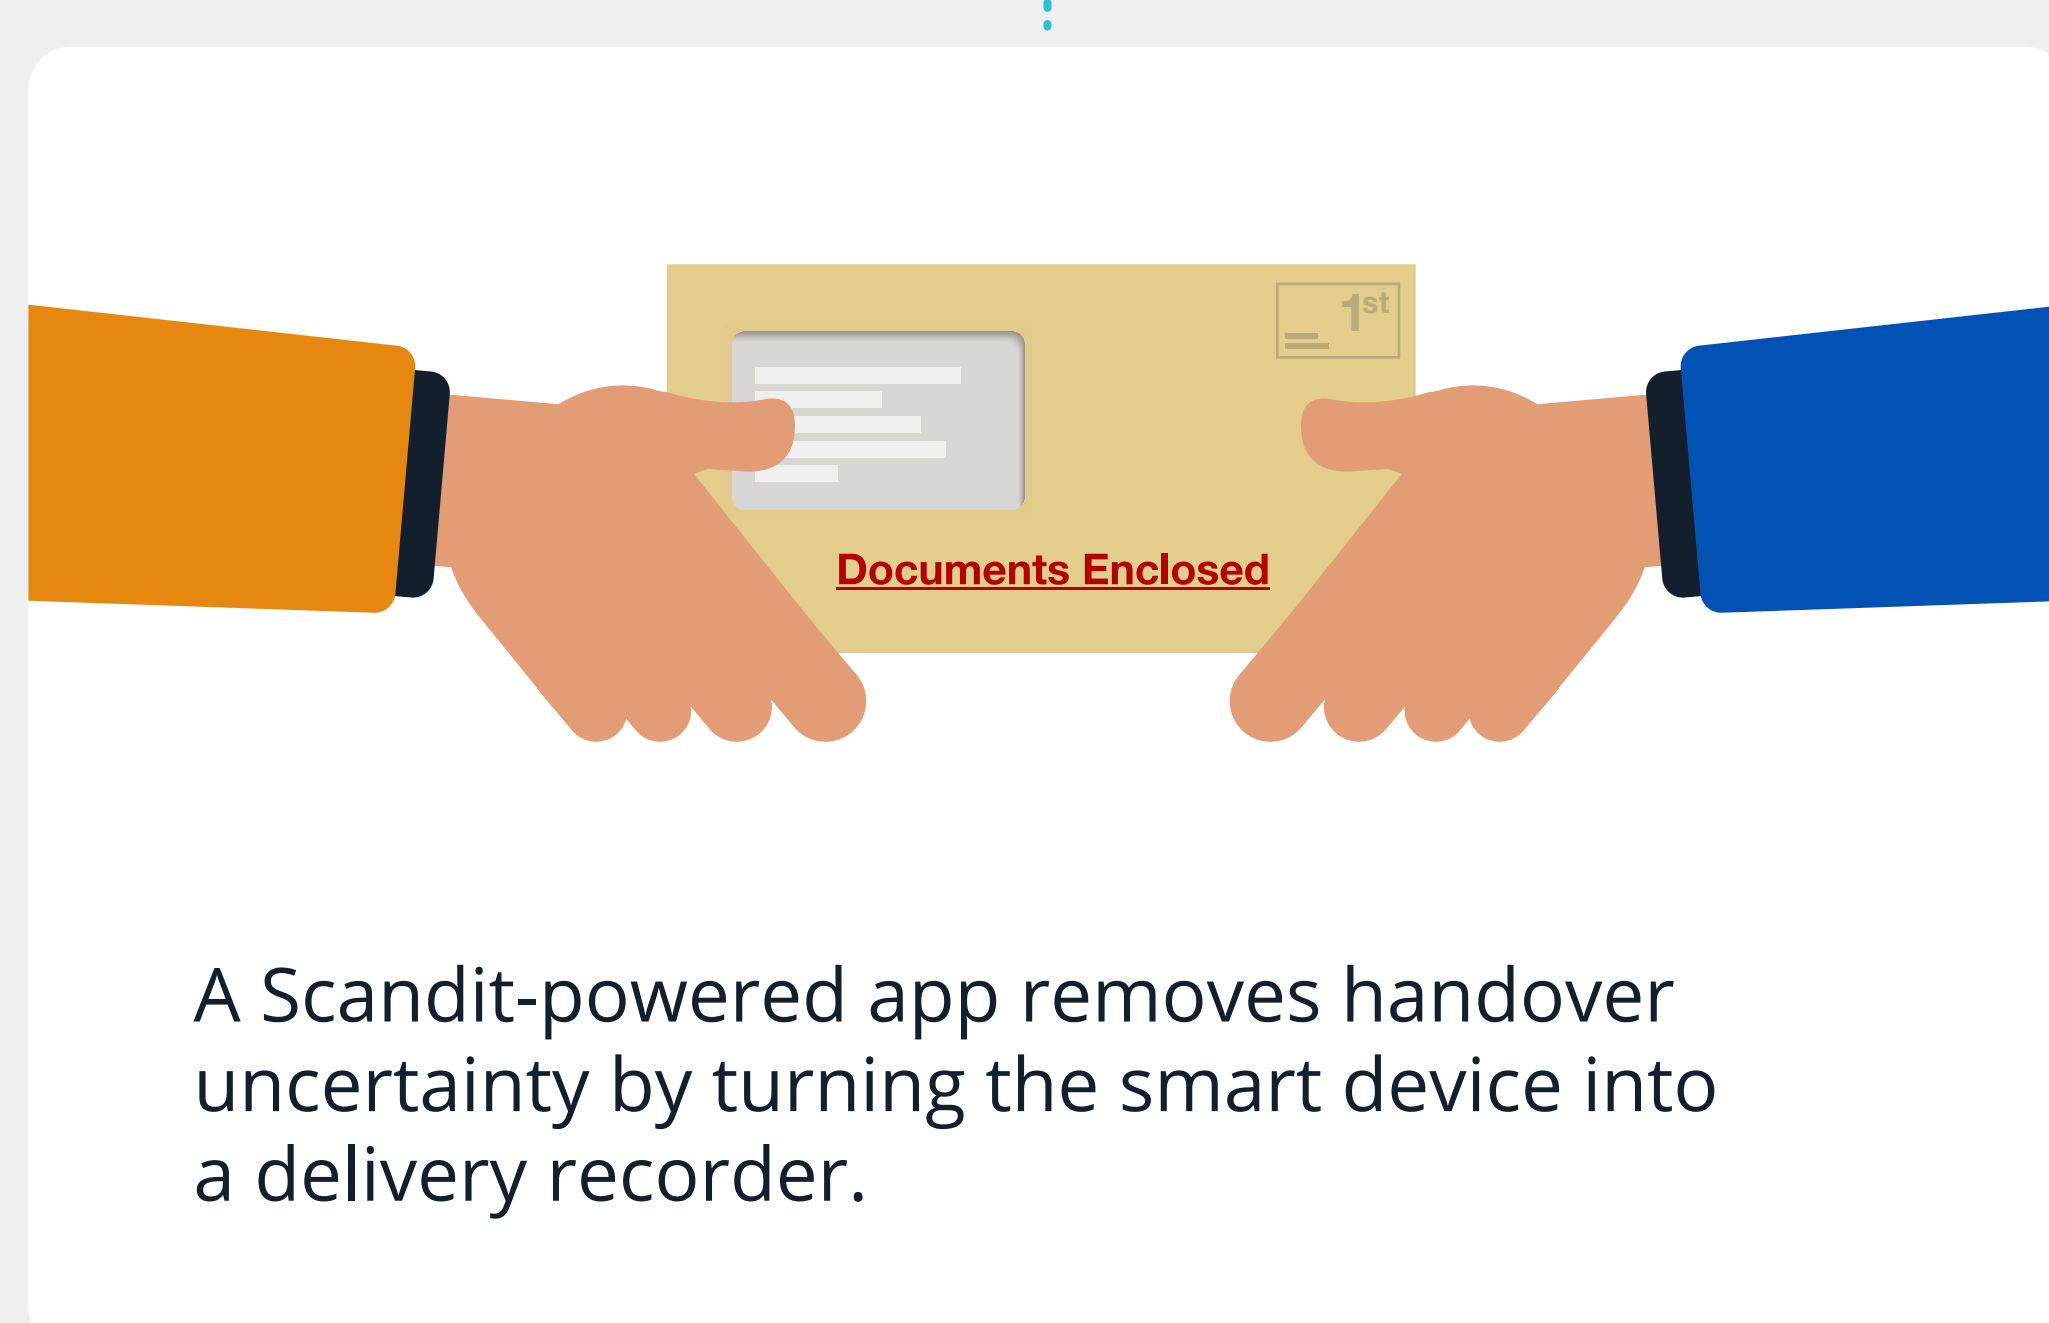

Accuracy - ensure it goes to the right recipient

Audit trail - record the ID document number to prove secure delivery

Added value - provide a higher level of service for your customers

A Scandit-powered app removes handover uncertainty by turning the smart device into a delivery recorder.

Compliance on Age-Restricted Deliveries

Scandit's ID scanning technology means it's fast and simple to deliver age-restricted products like alcohol. Drivers can contactlessly scan a wide range of ID documents on their Scandit-powered app to validate the recipient's age - letting the device make the delivery decision for them.

Capture Multiple ID Documents

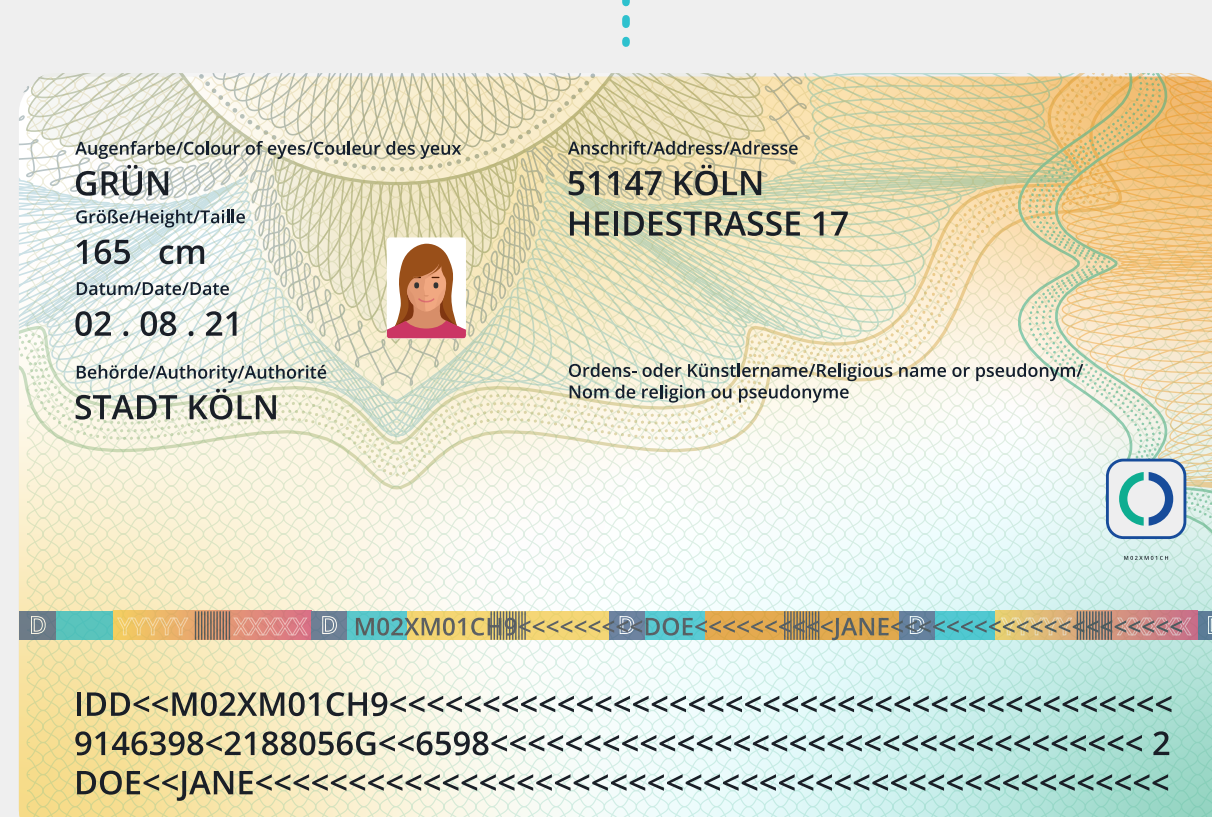

Scandit Smart Data Capture combines barcode scanning and optical character recognition (OCR) to read 2000+ ID documents worldwide including ID cards, passports, visa certificates, and driver's licenses.

In testing on PDF417 barcodes, we found over 163 different versions of the standard. We track this and constantly update the parser to ensure you're always up to date.

European and Australian Driver Licenses

Our ID scanning software reads and correctly interprets the human readable text on the front of the license.

Passports and European ID Cards

Scandit can scan and parse the 'machine readable zone'.

North American Driver's Licenses and ID Cards

A smartphone enabled with Scandit Smart Data Capture reads the PDF417 barcode on the back or the human readable text on the front.

Scandit Smart Data Capture for Driver Onboarding and Proof of Delivery

- **Enterprise-grade support** access to Scandit's customer support
- **Industry-leading accuracy** 100% scan accuracy rate for IDs with PDF417
- **Fast document scanning** in less than a second
- **Wide ID document coverage** 2000+ ID documents worldwide
- **Safe and secure** scanning that is fully compliant with applicable data protection laws, including but not limited to GDPR and CCPA, with no data stored on the device
- **Easy to implement** samples and UI elements, such as viewfinders and scanning guidance included in ID Scanning SDK.
